My Project Estimator Reference

As a company we had been looking for an estimating program that would bring accuracy and speed to our project estimates. Our research told us that we needed a program that could be modified to adapt to the many different building styles that our contractor base used. We also wanted our estimates to have a more professional appearance that was easy for our contractors to understand and make changes to as the construction process progressed through its stages.

My Project Estimator brought to us all the pieces that we were looking for in an Estimating program. We have greatly increased our accuracy and cut estimating labor time at least in half. The estimate format makes it much easier to walk through the material list with the Customer or Contractor and make the desired changes or confirm material uses.

After almost two years experience using the My Project Estimator program I would Highly Recommend the program to any Lumberyard trying to Improve Efficiency and Profit Margins.
